- 2) Safety System Bypass, which allows the unit to remain fully operational, even if part of the safety system is not. This feature allows the stored inventory of check stock to remain accessible in the event of a system safety sensor fault.
- 3) Microprocessor (MP) Control Override. This feature allows the system to continue to operate in the event of a failure in the microprocessor controls, by directing move commands directly to the drive motors for simple operation.
- 4) Full continuous tracking within the unit where the shelves are captured throughout the entire cycle, leaving no opportunity for the wheels to ever leave the track and also creating less noise and racket. This also helps prevent unnecessary torque, twisting and tension on the chain which helps drive the unit.
- 5) Chains to be Pre-Tensioned and Factory Installed, with no field adjustment required following installation for the life of the unit. .
